

A diagram of a vertical mechanism. A thick purple cylinder is the central component. At the top, a grey lever is pivoted to a fixed support on the left and has a horizontal arm extending to the right, ending in a circular contact point. At the bottom, another grey lever is pivoted to a fixed support on the left and has a horizontal arm extending to the right, ending in a circular contact point that touches the purple cylinder. The purple cylinder is shown with a jagged, broken top edge, indicating it is being deformed or crushed by the top lever's contact point.
